If you experience a display issue when viewing the online calendar, try clearing your browser cache and delete the cookies. Every web browser stores web pages, images and other downloaded content on the computer, which is called the browser's cache. Clearing it occasionally or regularly can protect your privacy; free up some space in your computer and often times fix some display issues on various websites you visit. Since every browser is different, check the online help for your browser for the steps involved in clearing the cache and deleting the cookies for your browser.
